

Orthopedic Bandage

Cast padding is a synthetic, protective bandage compatible with all casting materials, including POP, synthetic, fiberglass, and thermoplastics. It's used for managing soft tissue injuries, fractures, and orthopedic conditions.

Key features:

1. Easily conformable : Molds smoothly to body contours and joints. Autoclavable for sterile surgical use.
2. Tearable : Strong enough for support but easy to tear without causing discomfort.
3. High loft : Provides superior cushioning, even when wet.
4. Smooth finish : Feathers out neatly for a seamless application without ridges, making cast application easier.
